How to Vote in the Online General Election 2025

The following instructions explain how to cast or update your vote in the online voting system for the General Election 2025. You may change your vote at any time until the election closes.

1. **Previous Participation**

   You will be asked whether you have already voted in this election.

   - Select **"No"** if this is your first time voting.
   - Select "**Yes**" if you wish to change a vote you have already submitted.

2. **Identification of Previous Voting**

   If you selected "Yes", the system will display a list of words.

   - Select **all** words that you have seen during any previous voting attempt.
   - This includes words shown after both successful and unsuccessful attempts.
   - You must select every word you recognise.

   If the correct words are not selected, your vote will **not** be updated. For security reasons, the system will not indicate whether your selection is correct.

3. **Voting**

   Select a candidate, review your choice carefully, and submit your vote.

4. **Vote Identifier**

   After submitting your vote, the system will display a word.

   - This word allows you to change your vote later, if you choose to do so.
   - The word does **not** reveal which candidate you voted for.

   For security reasons, do not store or share this word.

Why is the identification of prior voting required?

The voting system allows voters to change their vote while maintaining election security. Identifying previously seen words verifies that you were present during earlier voting sessions and are therefore authorised to update your vote.

Need Assistance

If you encounter any problems while using the online voting system, please contact the election officials at: XXXXXXXX.
